DETAILED ACTION

Drawings

1. Figures 1-5 should be designated by a legend such as -- Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the adjacent memory cells being coupled to a same world line, and to a respective word line, claims 15-26 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an

Art Unit: 2891

application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d).

The top two layers in figure 7 are not numbered. They should be numbered and identified in the specification as well, if they have not already identified in the specification with respect to that figure.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable Baker et al., hereinafter Baker (US Patent 4,852,062) in view of Catabay et al., hereinafter Catabay (US Patent 6,800,940).

Regarding claims 1, 4, 5 and 6, Baker discloses in figure 11, a memory comprising:

a floating gate transistor including a source regions and drain regions, a gate region

projecting from the substrate and comprised between said source and drain regions, said gate

region having a predetermined length and width and comprising a first floating gate region 52

and a control gate region 54, characterized in that said floating gate region is insulated laterally,

along a direction orthogonal to a plane including the floating gate, source and drain regions, by a

dielectric layer 60, 64 with a dielectric constant value.

Application/Control Number: 10/749,130

Art Unit: 2891

Baker does not disclose the dielectric constant value is between 1 and 3.9 (low dielectric), and the layer is formed by an oxide layer, hydrated with alkylic groups.

Catabay discloses in figure 4, and column 6, lines 23-37, a carbon doped silicon layer 30 in the integrated circuit structure shown. Catabay further discloses this kind of layer is void free and have a dielectric constant of less than 3 (see column 4, lines 35-40 and 52-55), further disclosing low dielectric constant values reduces horizontal capacitance between conductive lines (see column 2, lines 1-5). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to use carbon doped oxide layer in the structure of Baker to benefit from the advantageous properties of the layer such as reduced capacitance between the gate electrodes. Note that using alkylic groups to dope the oxide layer is a method of doping the oxide layer.

Regarding claim 2, the floating gate regions are covered by a dielectric layer 58 before being insulated from each other through said dielectric layer with low dielectric constant value.

Regarding claim 3, the dielectric layer with low dielectric constant value is bounded between said floating gate regions, as can be seen in figure 11.

Regarding claims 15-26, Baker in view of Catabay substantially discloses the limitations in the claims, as discussed above, further disclosing the cells are organized in a matrix form, see figure 1A; a word line shown in the same figure; where adjacent cells are connected to the same/corresponding word line(s). Thus, the control gate regions are electrically connected.

Regarding claims 31-34, dielectric regions 56 are in direct contact to the floating gates, and the motivation as to making them low dielectric is stated above. Also, a second dielectric 66 is formed on the first dielectric region.

Art Unit: 2891

Response to Arguments

4. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dana Farahani whose telephone number is (571)272-1706. The examiner can normally be reached on M-F 9:00AM - 5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bill Baumeister can be reached on (571)272-1722. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
